

Complete Audiological Examinations

Comprehensive hearing test which includes air- and bone-conduction, speech audiometry, and immittance audiometry

A complete audiological examination (CAE) is the basic hearing examination. It consists of pure tone testing by air- and bone conduction, speech audiometry (speech reception and speech discrimination) and immittance audiometry (tympanometry and acoustic reflex testing). This type of examination is the starting point for many other procedures and the first step in the fitting of hearing aids
